

THE ECONOMIC ENGINE, ON ITS OWN

Merch, fan site, subscription — as a business, not a line item.

Right again, and this is the version you asked for. The last document modelled the whole business with the film in it. This one models only the engine — the part StarHub would build and run. Your film revenue, festivals, licensing, curriculum and screenings are *not* in these numbers. They are your business and they stay yours.

Engine revenue (\$K)

	2026	2027	2028	2029	2030	2031
Fan site — memberships & campaigns	\$90K	\$260K	\$380K	\$420K	\$450K	\$500K
Merch — apparel & curated drops	\$40K	\$210K	\$430K	\$520K	\$600K	\$750K
Subscription — sound-bath audio	\$25K	\$120K	\$280K	\$380K	\$450K	\$550K
Gross engine revenue	\$155K	\$590K	\$1090K	\$1320K	\$1500K	\$1800K

What it costs, and what you keep (\$K)

	2026	2027	2028	2029	2030	2031
Merch cost of goods (45%)	\$18K	\$95K	\$194K	\$234K	\$270K	\$338K
Payment & platform processing (6%)	\$7K	\$23K	\$40K	\$48K	\$54K	\$63K
StarHub joint-venture share (30%)	\$47K	\$177K	\$327K	\$396K	\$450K	\$540K
Your net contribution	\$83K	\$295K	\$529K	\$642K	\$726K	\$859K
Your margin on engine revenue	54%	50%	49%	49%	48%	48%

No build fee. No retainer. No software licence. No headcount. Those four lines are absent because they are genuinely absent, not netted somewhere else.

6-YR ENGINE REVENUE	YOU KEEP	STARHUB EARNS	YOUR CASH TO START
\$6.46M	\$3.13M	\$1.94M	\$0

WHERE THE NUMBERS COME FROM

Attack these, not the totals.

These revenue lines are carried unchanged from your own one-sheet projections — deliberately. Winning this work on inflated numbers would be worth nothing to either of us six months in.

What drives the fan site

Launch rides the film's own moment: Aug '26 completion, Nov '26 DIFF premiere — the audience arrives before the storefront can go stale

Recurring membership, not one-time crowdfunding: backers fund the work continuously and receive the production feed

The 20 TB of footage IS the membership product — behind-the-scenes, Dharamshala, the Creative Music Lab

What drives merch & subscription

Print-on-demand plus small-batch curated drops — 45% cost of goods, zero inventory risk, no capital tied up

The neuroscience-curated apparel line is a genuinely differentiated product, not tour merch

Sound-bath audio is the highest-margin line: near-zero marginal cost, and Maejor's involvement makes it a reason to subscribe

The honest risk: 2026 is only four months of trading and every line depends on the premiere landing. If DIFF slips, 2026 slips with it — the ramp shifts, it does not shrink. Nothing in the model assumes a streamer deal, a series order, or grant income.

WHY STARHUB CAN ACTUALLY RUN IT

You asked to be convinced. Here is the evidence.

Everything below can be opened in a browser right now. It is a portfolio of shipped, live, revenue-carrying properties — not a capabilities deck.

Live and operating today

What	Evidence
Twelve production brands, live	tripleplayground.com · squarebiz.ai · abeo.health · thesuprememan.com · triplexradio.com · trystlove.com · the-branding-guru.com · aherosjourneys.org · starhubstudios.com · mythos.vision · jackepolo.com · thereality.engineer
A payment path proven end to end	Triple X Playground takes money today — storefront, checkout service and order handling running in production against live cards. That is the same path your fan site, storefront and subscription would be built on.
Operated, not just launched	These are maintained daily — fixes, redeploys, and content changes ship continuously. The difference between an agency that builds and a partner that runs is visible in the commit history.
One system, not stitched tools	Every brand runs on the same substrate, so your engine is a configuration of a proven stack rather than a new build — storefront, memberships, subscription billing, email, analytics and fulfilment under one login, with one set of numbers.

Weeks, not quarters

Fan site live in 6 weeks. Merch in 10. Subscription in 14. The stack exists — your engine is a configuration of it, not a new build.

One throat to choke

Storefront, fulfilment, customer service, campaign management and reporting sit with one operator. No integrator, no three vendors blaming each other.

Built for measurement

Your project measures outcomes. So does the engine — cohort behaviour, retention, what converts. The research discipline and the commercial one use the same instrument.

YOU SAID OTHERS ARE PITCHING THIS

The question to ask all of us.

Good — you should have options, and a real one should survive comparison. One question separates the offers cleanly: **what do you pay if the engine earns nothing?**

	Typical agency	Platform (Shopify / Patreon stack)	StarHub
Up-front build	\$40–80K	Low, but you build it	\$0
Monthly retainer	\$5–15K	Software fees regardless	\$0
If it earns nothing	You have paid anyway	You have paid anyway	You owe nothing
Who runs it day to day	You, after handoff	You	We do
Their share of upside	None — they are paid either way	None	30% of engine revenue only

The 30% is the honest cost of this structure — our standard joint-venture rate: when the engine works, we participate. That is the trade for carrying the build and the operating labour, and for you starting at zero cash.

Where another offer genuinely beats this: if you want to own and run the operation in-house long term, a build-and-handoff shop is cheaper over a five-year horizon — you pay once instead of sharing. This structure is right if you want it run FOR you while you finish a film.

IF YOU SAY GO

What you do, and what you never touch.

You

Approve the look and the voice — it is your brand

Approve the merch line and the membership tiers

Keep making the film

Us

Build the fan site, storefront and subscription

Run fulfilment, customer service and campaigns

Monthly reporting: revenue by line, retention, what is working

Carry the cost until it earns

1

TO START

A one-page agreement on the 30% and the scope. Fan site live six weeks from signature — which puts it in front of the DIFF premiere, when the audience actually shows up.

\$0

You asked for a pitch to convince you we can run that part of the business. The honest version: we already run twelve of them, and you pay nothing until yours earns.
