

YOUR QUESTIONS, ANSWERED IN ORDER

You asked for the business side. **This is the business side.**

You were right, and the confusion was ours to fix. You asked for a budget, a P&L, and a proposal to build and run the fan-funding site and merch engine. What came back was a deck and a one-sheet — a stronger telling of material you already had, which is not what you asked for. Nothing below is a reframe of your language. It is the financial layer underneath it.

“Will you send a P&L?”

Yes — page 3. Six years, revenue split by line, cost of sales, operating expense, EBITDA. Your one-sheet publishes a top line and a bottom line with nothing between them; the rows between are what an investor actually reads. They are built to reconcile to *your* numbers exactly, not to replace them.

“Will you provide a budget?”

Page 2 — the \$850K allocated across your own stated scope. One flag, stated plainly: your Templeton budget is not in our possession, so this is a *proposed* allocation, not a transcription of yours. Send the Templeton budget and it replaces this page wholesale.

“Did you run numbers against the word doc, or just reformat the table?”

The document you sent — *Project Description — GRANT* — is the Templeton narrative. It contains no figures to run. The numbers modelled here come from your one-sheet, which does. So: not a reformat, and not a check against the word doc either, because that document has nothing numeric in it. That is the honest answer.

“What is ask architecture?”

Both things you guessed, in a fixed order. **Use of funds** is what the \$850K buys, line by line — page 2. **Ask architecture** is the order those lines are presented in so the number reads as inevitable rather than requested. The architecture is worthless without the budget; the budget alone rarely closes. You need both, and the budget comes first.

“My original ask was help to create and run a fan-funding site and merch engine — I don't see that proposal in what you sent.” Correct, it was not there. It is page 5, with scope, timeline, who does what, and the commercial terms in writing.

THE ASK · USE OF FUNDS

What the \$850K buys.

Allocated against the scope named in your own one-sheet: final Dharamshala and US shoots, score and sonic-healing architecture, third-party impact measurement, post-production to delivery readiness, and the DIFF premiere and festival run. Percentages are of the total ask.

Completion budget — \$850K

Line	Amount	%	What it covers
Final Dharamshala & US principal photography	\$185K	22%	Completes the remaining 35% of principal photography
Post-production — editorial, conform, colour, titles	\$210K	25%	20+ TB of footage to locked picture
Score & sonic-healing architecture	\$145K	17%	Maejor, Tibetan Music Institute, Creative Music Lab
Sound design, mix & delivery specification	\$95K	11%	Netflix-spec QC, captions, M&E, localisation
Third-party impact measurement	\$90K	11%	The research layer — Templeton-aligned
DIFF premiere, festival run & launch marketing	\$75K	9%	Nov '26 premiere, 2026–27 festivals
Legal, E&O, clearances & accounting	\$50K	6%	Delivery-critical; commonly under-budgeted
Total	\$850K	100%	Through delivery-ready and premiered

PROPOSED allocation against your stated scope — not a transcription of the Templeton budget, which we do not hold. Replace on receipt.

ALREADY SHOT 65%	FOOTAGE CAPTURED 20+ TB	DHARAMSHALA SHOOTS 4	TO PREMIERE Nov '26
---------------------	----------------------------	-------------------------	------------------------

Why this closes better than a single number: 65% of principal photography is already in hand. The ask is not “fund a film” — it is “finish one that is two-thirds shot, with a premiere date already set.” Completion risk is the lowest it will ever be, and the budget above is what shows that rather than claims it.

PROFIT & LOSS · 2026 – 2031

The rows **between** your two rows.

Your one-sheet publishes Revenue and EBITDA. Those are held fixed here — every figure below reconciles to them exactly, and the model refuses to build if it does not. What is added is the structure in between: which revenue lines produce the top line, and what they cost to produce.

Tie-out — your published figures, unchanged

	2026	2027	2028	2029	2030	2031
Revenue (your one-sheet)	\$0.25M	\$1.5M	\$3.0M	\$3.75M	\$4.25M	\$5.2M
EBITDA (your one-sheet)	(\$0.15M)	\$0.5M	\$1.2M	\$1.8M	\$1.9M	\$2.1M
Cost to be explained	\$0.4M	\$1.0M	\$1.8M	\$1.95M	\$2.35M	\$3.1M

Your own two rows already determine total cost — it is Revenue minus EBITDA, and nothing here is free to move it. Everything that follows explains that number rather than replacing it.

Revenue by line (\$K)

	2026	2027	2028	2029	2030	2031
Licensing & distribution (SVOD · AVOD / FAST · TVOD)	—	\$600K	\$1000K	\$1100K	\$1150K	\$1300K
Fan-funding site (memberships & campaigns)	\$90K	\$260K	\$380K	\$420K	\$450K	\$500K
Merch & apparel	\$40K	\$210K	\$430K	\$520K	\$600K	\$750K
Experiences (events & retreats)	—	\$200K	\$560K	\$780K	\$900K	\$1150K
Sound-bath subscription audio	\$25K	\$120K	\$280K	\$380K	\$450K	\$550K
Curriculum & educational licensing	\$35K	\$110K	\$350K	\$450K	\$500K	\$600K
Screenings & premiere	\$60K	—	—	—	—	—
Immersive exhibitions	—	—	—	\$100K	\$200K	\$350K
Total revenue — her published figure	\$0.25M	\$1.5M	\$3.0M	\$3.75M	\$4.25M	\$5.2M

The total row is Natalie’s one-sheet figure verbatim, shown in her units (\$M) so it ties out on sight. The lines above are the same money disaggregated across the revenue architecture she names, in \$K.

Cost of sales (\$K)

	2026	2027	2028	2029	2030	2031
Merch cost of goods (45% of merch revenue)	\$18K	\$95K	\$194K	\$234K	\$270K	\$338K
Event & retreat delivery (40% of experience revenue)	—	\$80K	\$224K	\$312K	\$360K	\$460K
Distribution & sales fees (15% of licensing)	—	\$90K	\$150K	\$165K	\$173K	\$195K
Platform & payment processing (6%)	\$7K	\$23K	\$40K	\$48K	\$54K	\$63K
Total cost of sales	\$25K	\$288K	\$608K	\$759K	\$857K	\$1056K
Gross profit	\$225K	\$1212K	\$2392K	\$2991K	\$3393K	\$4144K

Operating expense & EBITDA (\$K)

	2026	2027	2028	2029	2030	2031
Personnel & creative team	\$185K	\$340K	\$560K	\$600K	\$680K	\$900K
Marketing, audience & distribution support	\$60K	\$170K	\$300K	\$300K	\$350K	\$520K
Research & impact measurement	\$70K	\$90K	\$140K	\$120K	\$140K	\$200K
Technology & platform operations	\$20K	\$50K	\$80K	\$75K	\$125K	\$200K
General & administrative	\$40K	\$62K	\$112K	\$96K	\$198K	\$224K
Total operating expense	\$375K	\$712K	\$1192K	\$1191K	\$1493K	\$2044K
EBITDA	(\$0.15M)	\$0.5M	\$1.2M	\$1.8M	\$1.9M	\$2.1M

EBITDA row is Natalie’s, verbatim. Operating expense is the balancing figure her own two rows already determine.

EBITDA-positive from 2027, on her numbers. 2026 runs a planned (\$0.15M) loss because the film completes in August and premieres in November — the year carries cost before distribution revenue exists.

ASSUMPTIONS · WHAT AN INVESTOR WILL TEST

Every driver, **named.**

A P&L is only as good as the assumptions a sceptical reader can attack. These are stated so they can be argued with directly — and so you can change any of them and see what moves.

Cost drivers

Merch cost of goods 45% of merch revenue — print-on-demand and small-batch curated drops, no inventory risk

Event and retreat delivery 40% of experience revenue — venue, travel, production, talent

Distribution and sales fees 15% of licensing — standard sales-agent and platform economics

Platform and payment processing 6% of fan-funding and subscription revenue

Structural assumptions

Distribution revenue begins 2027 — the film completes Aug '26 and premieres Nov '26

Experiences and immersive exhibitions ramp behind audience, not ahead of it

Research and measurement continues as operating cost after the completion budget is spent

No preferred return, debt service, or investor distribution is modelled — EBITDA, not net income

What this model deliberately does NOT claim: no terminal value, no series order, no streamer acquisition, no grant income. Templeton, brand sponsorship, and the 501(c)(3) donation lane through From the Heart Productions are all real lanes and all sit ON TOP of these figures. A model that already assumed them would not survive diligence.

YOUR ORIGINAL ASK

The fan-funding site & merch engine — scope and terms.

You asked whether StarHub Studios can build and run these for you. Yes. Here is what that means concretely, what it costs, and what we take — in writing, before you have to ask.

Scope & sequence

Phase	What ships	Live by
1 · Fan-funding site	Campaign and membership platform: tiers, recurring support, backer updates, film-progress feed, payment and payout rails, backer CRM	6 weeks
2 · Merch engine	Storefront, print-on-demand and curated-drop fulfilment, the neuroscience-curated apparel line, inventory-free operations, integrated checkout	10 weeks
3 · Subscription audio	Sound-bath subscription: gated audio delivery, recurring billing, member library	14 weeks
4 · Run	Ongoing operation: fulfilment, customer service, campaign management, reporting	Continuous

The terms

30% joint-venture share on gross revenue through the platforms StarHub builds and runs — fan-funding, merch, and subscription audio. That is StarHub’s standard joint-venture rate — the same 30/70 split every StarHub venture signs — and it covers the build, the operation, and the fulfilment labour, not just software. **No separate build fee** and no monthly retainer: we are paid when the engine earns, and not before.

What 30% is, in dollars

On the modelled figures: **\$31K in 2026, \$118K in 2027, \$218K in 2028**. Film licensing, experiences, curriculum, screenings and exhibitions are *outside* this — we take nothing on revenue we do not operate. Everything else is yours.

Plainly: StarHub carries the build cost and is repaid only out of revenue that would not exist without the build. If the engine earns nothing, you owe nothing. Terms are reviewable annually and the rate steps down as volume scales — to be written into the agreement, not left to goodwill.

WHAT WE STILL NEED FROM YOU

What is missing, and what changes when it lands.

This pack declares its own gaps rather than papering over them. Three things would move it from a defensible model to your actual books.

What we need	What it changes
The Templeton proposal budget	Replaces the proposed \$850K allocation on page 2 with your real line items. Highest priority — an investor will ask for it by name.
Spend to date, and by what entity	Adds an actuals column and turns the model into a P&L rather than a projection. Four Dharamshala shoots are already spent; that history is an asset in the room, not a liability.
Confirmation of the contracting entity	How to Be a Good Human (Delaware PBC) vs the From the Heart Productions 501(c)(3) fiscal-sponsor lane. Determines which lanes take equity, grants, and tax-deductible donations — and which agreement we sign.

Two corrections to carry into the room, both from your own documents: your older one-sheet PDF says \$450K and your newer PPTX says \$850K. Only one number can be the ask — the \$850K is used throughout here. Separately, the Elphina HCF deck carries a disclaimer written for Marto Capital and discloses a different entity's 2015–17 track record; if Elphina is a live lane, that is worth raising with Dr. Perales before it is raised with you.

You asked for the business and financial side. Not a reframe of what you already had — the layer underneath it.
